Solutions for a new millennium

Do you want to realize the benefits of a modern enterprise resource planning system, but find the complexity and cost commonly associated with implementing such applications a real concern?

Are you faced with the daunting prospects of modifying or replacing your financial systems to support multiple sites and organizations (multi-org), currencies, or perhaps mergers and acquisitions?

Infotegrity Rapid is a value added service that allows your organization to implement Oracle enterprise resource planning (ERP) software quickly and cost effectively.

The benefits of Infotegrity Rapid are clear:

- It is fast because it focuses on implementing the most critical functions and processes you need to run your business
- It is low risk because our specialist consultants help you decide what you need to implement, and pass their knowledge on to your own staff
- You will know the total cost of your implementation in advance, and you know what you're getting for your money.

ELIMINATES COMPLEX AND COSTLY IMPLEMENTATION ACTIVITIES

The Oracle enterprise resource planning products support good business practice. By adopting a baseline of standard business processes, Rapid eliminates the traditional 'as is' and 'to be' process definition phases.

PROVIDES THE RIGHT FUNCTIONALITY FOR SUCCESSFUL, GROWING COMPANIES

With Rapid, flexibility is assured. Our templates and work-plans can be configured to cater for processes outside the baseline and for complex organizational structures, multiple currency and multi-site installations.

ENABLES ACCURATE COST PREDICTION AT THE START OF YOUR PROJECT

Rapid includes project tools, technology and techniques to estimate the cost and time-line for standard baseline implementation. This advantage enables Infotegrity to estimate the additional time and cost required to implement non-standard features. We can also accurately define the scope and forecast the implementation costs at the start of the project.

APPLIES EXPERIENCE OF BEST PRACTICE IN IMPLEMENTATIONS

While reducing implementation timelines and minimizing client cost, Rapid ensures that milestones and progress check points are clearly defined, and that good project management disciplines and quality controls are enforced. Rapid features project plans, quality assurance metrics, document templates, test scripts, and issue tracking and resolution management software. Rapid is a new service from Infotegrity that allows your organization to implement Oracle enterprise resource planning (ERP) software quickly and cost effectively.

A STRUCTURED APPROACH TO PROJECT IMPLEMENTATIONS

Infotegrity Rapid identifies the six key stages to any successful project.

STEP 1. DEFINITION

Working with your project manager, we lay the project foundations; define the approach, scope and objectives of the project; agree a project plan and train the project team. We will also help define a resource plan to ensure that the right people are available to successfully deliver the project.

STEP 2. ANALYSIS

The precise nature of your requirements are determined in a workshop environment. Using a combination of questionnaires and standard process flows we will show how your company can most effectively exploit the best practices provided by the Oracle E-business Suite. We will confirm how Oracle supports these requirements, using the Oracle demonstration suite.

STEP 3. SOLUTION DESIGN

The application is set up to support the processes agreed to during the analysis phase, and thoroughly tested with the users. Any custom requirements are identified and designed.

STEP 4. BUILD

The application is configured, and tested to ensure that the new system meets your business and operational requirements. Any custom interfaces and data conversion routines are tested.

STEP 5. TRANSITION

This stage prepares the new system and your company to go live. Key members of your staff are trained so you can support the operation of the Oracle E-business Suite in the future.

STEP 6. GOING LIVE AND SUPPORT

After we have confirmed that the production system meets all of the acceptance criteria your company will rapidly start to benefit from your new ERP system.

HOW TO SECURE A RAPID SOLUTION

To find out how you can implement an Oracle E-business Suite rapidly, please contact Infotegrity.
